

Chat Bot

Add subject

That all the numbers in your massejli account have one chat bot, it is preferable that the subject be fragmented and accurate.

The chat bot is presented in the language spoken by the contact, provided that you have added this language and entered the subject on it, and this is done by pressing Add Language, and thus adding subjects, a window will appear in front of you. Type the subject command, the answer title and the answer subject and then click Add Subject.

Click on the subject that you have added, two boxes will appear, the first field for adding the message which means adding the supposed message sent to you, and the second field for adding the answer, the answers with which the chat bot will respond automatically.

The threads that have a gray background adjacent to the webhook URL.

You can import and download chat bot subject to and from massejli.

Do not forget to click the save button when you are finished adding, editing, or saving subject
